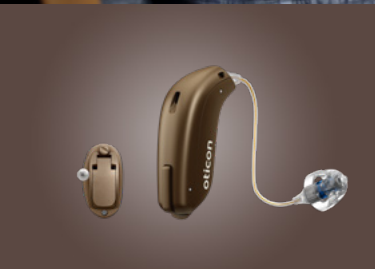
OTICON | **Jet**

Great sound. Great choice.

Choose a quality hearing aid that connects to your devices



oticon
life-changing **technology**

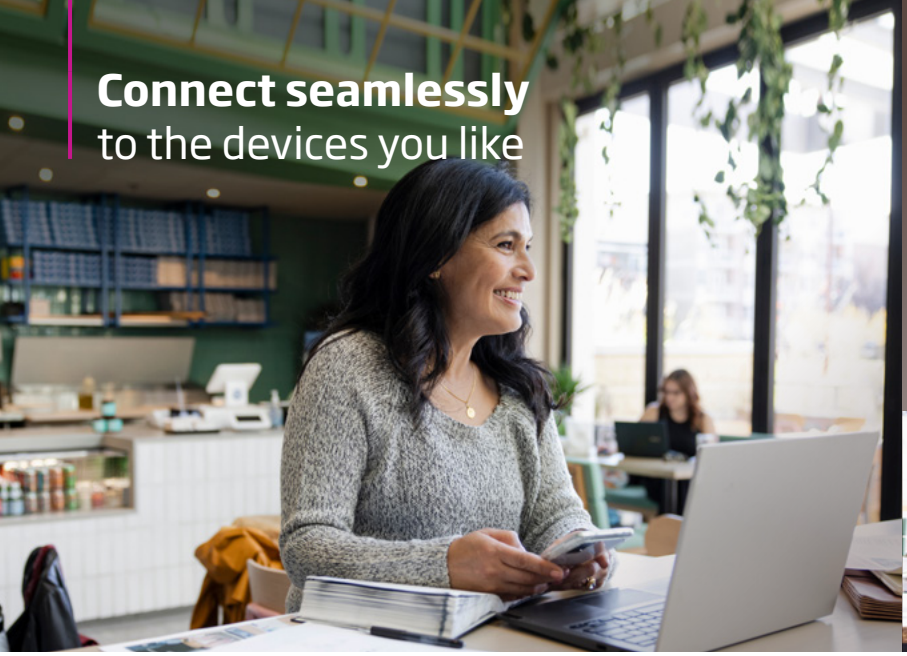
Do you want a hearing aid with **simply great sound quality?**

With Oticon Jet, you'll get a hearing aid that focuses on doing the most important thing first: giving you great quality sound.

With high-resolution sound, Oticon Jet captures the details of your life. Since you hear with your brain, Oticon Jet features BrainHearing™ technology designed to help you make sense of sound.

To do this, Oticon Jet's microchip is so fast that it even reduces noise between words. Oticon Jet helps you focus on the sounds in front of you by gradually reducing unwanted sounds from increasingly noisy surroundings. This makes it easier for you to follow conversations in noisy environments. What's more, anti-feedback technology reduces squealing or whistling in your ears when someone comes close – like a loved one coming in for a hug.

Anti-feedback technology reduces squealing or whistling in your ears when someone comes close.



Connect seamlessly to the devices you like

Oticon Jet connects via advanced Bluetooth Low Energy technology, giving lower energy consumption than other hearing aids with Bluetooth Classic.

Made for iPhone | iPad | iPod

With Oticon Jet, you can easily connect to your phone or other devices using Bluetooth® Low Energy technology. Using our Oticon ON app, you can then control your hearing aids. This is handy for discreetly adjusting the volume and switching between dedicated programs for specific situations and much more.

Stream audio from iPhone® or Android™
Oticon Jet offers direct streaming from iPhone, iPad® and iPod Touch®. This means you can play music, podcasts, or any other audio in your hearing aids. The audio comes wirelessly from the device. If you have an Android phone, you simply use our ConnectClip accessory to enable wireless audio streaming.

Connect to many wireless accessories
Oticon Jet has a wide range of helpful wireless accessories.

- A TV Adapter that sends TV audio wirelessly to your hearing aids
- A Remote Control for discreet hearing aid management
- A choice of multi-purpose devices that function as remote microphones; clipping onto another person's clothing and sending their voice directly to your hearing aids:
  ConnectClip, which is also used for streaming with Android and hands-free calls with iPhone, iPad and Android.
  EduMic, which also gives access to classroom microphone systems for educational use.

Get just the **style for you**

Oticon Jet gives you nine styles to select from, so you can find just the one for you. And with five different colours, you can choose the one that best matches the colour of your hair or skin.

Discreet in-the-ear hearing aids
If it's important that your hearing aids are very discreet, you might prefer one of these small types of Oticon Jet hearing aids that sit in your ear canal. These are custom made for your ears and come in a variety of sizes, with the smallest being almost invisible to other people.

Sleek behind-the-ear hearing aids
Many people choose a hearing aid that sits behind their ear. The miniRITE style is sleek, discreet and surprisingly small. Behind-the-ear hearing aids are easy to handle, with a single or double push-button for easy volume and program control. These styles can fit virtually any ear.
